Summary

I'm a proficient software engineer in Python and JavaScript. Natural problem solver who enjoys independent learning, collaboration, and creating human-centered interfaces. I'm a graduate student in Software Engineering at the University of Maryland. Background in Mechatronics engineering and manufacturing.

Technical Skills

Python: Django, Django REST API, Flask, Pandas, , AWS API, Pillow, SQL ORM

JavaScript: React, React-Router, Typescript, Material UI, Motion, Plotly, Leaflet, Webpack

CSS: Tailwind CSS, Framer, Animations, Bootstrap, Transitions, Flexbox, Grid, Responsiveness

Databases: SQLite, PostgreSQL, MongoDB, Google Firebase

Amazon Web Services (AWS): S3, CloudFront, email services (SES)

APIs: Stripe, Bunny.net, Brevo

Version Control: GitHub

Experience

Full-Stack Software Engineer | Self-Employed

Jul 2023 – Present

Designed, developed, and deployed multiple full-stack web applications for small businesses, managing the full development lifecycle from system design through deployment.

Built responsive, user-friendly interfaces with React.js, Tailwind CSS, Bootstrap, and Plotly, while engineering scalable back ends with Django, Flask, SQLAlchemy ORM, and Django ORM.

Implemented features such as client/order management, cash-flow tracking, WhatsApp notifications, media storage on AWS S3, authentication, and email-based communication.

Delivered solutions across domains including:

- Laundry service platform – client/order/cash-flow management with WhatsApp order tracking.
- Nutritionist CMS – meal planning, recipe database, progress tracking, and blog management.
- Apartment management app – tenant/lease tracking, maintenance requests, and financial oversight
- Video rental system – subscription payments via Stripe, inventory management, and email notifications.

Mechanical Design Engineer | Carrier HVAC Mexico

2019 - 2022

Responsible for engineering change design review. Produced monthly reports on engineering change reworks.

Managed bulk data updates impacting thousands of BOMs within a relational database. Normalized tables containing unique purchase parts into relational tables, resulting in a 90% reduction in total rows. This streamlined the part purchasing process.

Volunteer Experience

Survey Results Visualization | American Institute in Taiwan

Spring 2023

- Analyzed survey responses from more than 300 employees regarding perceptions to identify variations between subpopulations.
- Created data visualizations in multiple languages for a diverse audience.

Projects

NYC LEP Speakers | javrobs.pythonanywhere.com/nyc_lep_speakers/

Sunburst and map visualization of Limited English Proficiency (LEP) residents of NYC.

- SQL database loaded with Pandas ETL. Django ORM querying and API. JS Plotly and Leaflet front end.

Austin Housing | www.javrobs.github.io/house_pricing_analysis/

Map visualization of house sale prices in Austin from 2018 to 2021, fed into a linear regression and neural network models for price estimation.

- Pandas ETL, TensorFlow and Scikit Learn models, Flask API, Leaflet and Bootstrap front end.

Education

M.Eng. in Software Engineering | University of Maryland

Sep 2025 – May 2027 (In progress)

- Coursework: AGILE development, Software Development Life Cycle, Machine Learning, Deep learning, Secure coding practices, Code weaknesses and vulnerabilities.

Certificate of Data Analytics and Visualization | Tecnológico de Monterrey

Jan – Jun 2023

- Coursework: AGILE development, Machine Learning, Secure coding practices.

B.Eng. in Mechatronics | UANL

2014 - 2019

- French Mexican Agreement for Engineering Formation (MEXFITEC) scholarship holder.
- One year engineering program at the "Institut National des Sciences Appliquées" (INSA) in Lyon, France.

Native English and Spanish speaker, fluent in French
US Permanent Resident (I do not need visa sponsorship)
