Summary

Software engineer, proficient at independent learning, collaboration, and creating human-centered interfaces. Background in Mechatronics engineering and manufacturing.

Education

M.Eng. in Software Engineering Fall 2025

University of Maryland

- GPA 3.67

B.Eng. in Mechatronics Aug 2014 – Dec 2019

Autonomous University of Nuevo León (UANL)

- MEXFITEC scholarship holder
- GPA 3.72

Experience

Full-Stack Software Engineer Jul 2023 – Present

Self-Employed

Designed, developed, and deployed multiple full-stack web applications for small businesses, managing the full software development lifecycle from system design through deployment and consistent maintenance. Built responsive, user-centric interfaces with React.js, Tailwind CSS, Framer, Bootstrap, and Plotly. Engineered scalable back ends with Django, Flask, SQLAlchemy ORM, and Django ORM.

Delivered solutions across different domains, including:

- Laundry service platform – Implemented client/order/cash-flow management with WhatsApp order notifications. Reduced administration overhead by 90% (from 5 hours to 30 minutes daily).
- Nutritionist CMS – Created platform for meal planning, recipe database, progress tracking, S3 user upload storage, and blog management.
- Apartment management app – Established tenant/lease tracking, maintenance requests, email notifications with Brevo, Bunny.net user upload storage and financial oversight. Greatly improved communications, tracking and financial reporting.
- Video rental system – Created a video rental platform with Bunny.net streaming, subscription payments via Stripe, inventory management, and email notifications.

Mechanical Design Engineer

Dec 2019 – Apr 2022

Carrier HVAC Mexico

Responsible for engineering change design review. Produced monthly reports on engineering change reworks.

- Managed bulk data updates impacting thousands of BOMs within a relational database.
- Normalized tables containing unique purchase parts into relational tables, resulting in a 90% reduction in total rows. This streamlined the part purchasing process.

Volunteer Experience

Survey Results Visualization | American Institute in Taiwan

Spring 2023

- Analyzed survey responses from more than 300 employees regarding perceptions to identify variations between subpopulations.
- Created data visualizations in multiple languages for a diverse audience.

Technical Skills

Languages: Java, Python (Django, PyTorch, Numpy, Flask, Pandas, AWS API, Pillow, SQL ORM), JavaScript and TypeScript (React, Material UI, Motion, Plotly, Leaflet, Webpack), CSS (Tailwind, Framer, Animations, Bootstrap, Transitions, Flexbox, Grid, Responsiveness), Go (Fiber).

Databases: SQL (SQLite, PostgreSQL), No-SQL (MongoDB, Google Firebase)

APIs: Stripe, Bunny.net, Brevo, AWS (S3, CloudFront, email services)

Version Control: GitHub, GitLab

Software Development Practices: AGILE development, SDLC, Machine Learning, Deep Learning, Secure coding practices, Code weaknesses and vulnerabilities analysis

Projects

NYC LEP Speakers Analysis | javrobs.pythonanywhere.com/nyc_lep_speakers/

Sunburst and map visualization of Limited English Proficiency (LEP) residents of NYC.

- SQL database loaded with Pandas ETL. Django ORM querying and API. JS Plotly and Leaflet front end.

Austin Housing Analysis | www.javrobs.github.io/house_pricing_analysis/

Map visualization of house sale prices in Austin from 2018 to 2021, fed into a linear regression and neural network models for price estimation.

- Pandas ETL, TensorFlow and Scikit-Learn models, Flask API, Leaflet and Bootstrap front end.
